

**ROBERT PARKER COFFIN BRIDGE IMPROVEMENTS,
LONG GROVE, ILLINOIS**

This maintenance project included the replacement of vertical cords and top cords on the bridge structure, removal, cleaning and replacement of limestone foundation blocks, sandblasting and repainting bridge structure. Related to the improvements were the replacement of the concrete approach slabs with brick pavers and granite header banding and the installation of underdrains to help preserve the limestone foundation. This project was completed in the floodway and was designed with no fill.
