

**SANITARY SEWER INSPECTION AND LINING,
EFFINGHAM, ILLINOIS**

This project included the inspection, cleaning, and lining of nearly 4,500 lineal feet of sanitary sewers. These sewers are scheduled to be lined with Cured-in-Place Pipe (CIPP) technology. These sewers were located in a residential area where conventional sewer repairs would have been cost prohibitive due to their impact on paved roadways. This project was publically bid and came in roughly 25% beneath the engineer's estimate of construction cost.

Client: City of Effingham
Contact: Steve Miller, City Engineer
Phone: 217-342-9414
Construction Cost: N/A
Engineering Cost: \$6,700
Services Provided:

- Sanitary Sewer Inspection
